SNAP! Building Control

SNAP! Building Control is a modular web based package consisting of Submit-a-Plan, DataSpace Live, DataSpace Consult Live and My Virtual Mail Room that enables Local Authorities to receive, view, download and consult on Building Control applications electronically over the internet. SNAP! Building Control modules require no inhouse software installation or the provision of expensive servers.

Featuring full membership of the LABC Submit-a-Plan Building Control Portal all online applications automatically appear in DataSpace Live for processing. Even scanned paper applications can be delivered directly into DataSpace Live just like an electronic application using My Virtual Mail Room.

In addition to application receipt DataSpace Consult Live provides a secure, feature rich, dynamic consultation environment incorporating consultees into the electronic approval process and removing the need for Local Authorities to print and post applications.

Low Cost Solution

All SNAP! Building Control modules are externally web hosted and do not require any onsite installation or the provision of expensive servers. The intuitive design of our solutions also enables training to be kept to a minimum helping to keep the costs low.

All SNAP! Building Control solutions are continuously updated online ensuring that users are always running on the latest version, thus removing the need for costly onsite upgrades.

Submit-a-Plan Applications

A major benefit for applicants using the Submit-a-Plan National Portal over inhouse developed systems is that applicants have a single login, standard forms and the same interface for every Local Authority, making the application process that much quicker and simpler.

All applicants are provided with an online account where a historic record of all part and completed applications are stored. Applicants can even amend their applications after submission by adding new and revised drawings.

Application Processing

DataSpace Live is at the heart of SNAP! Building Control and provides everything needed for a Local Authority to process an application received electronically from Submit-a-Plan.

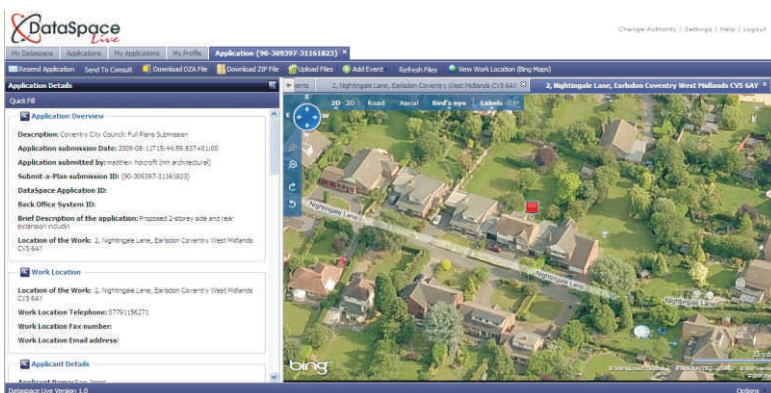

DataSpace Live includes all the tools required to process applications, enabling Local Authorities to view, measure, print and download applications all through a web browser, from any location.

With a built in map interface and diary, DataSpace Live pinpoints work locations and helps plan activities. Application details can be easily shared with third party software with the DataSpace Live 'Quick Fill' tool.

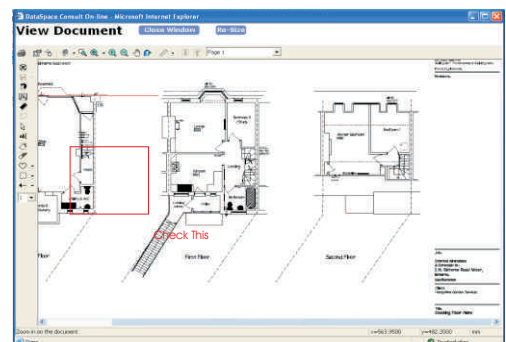

Pre-Application Advice (Exclusive to applicants in the Partner Authority Scheme)

New to Submit-a-Plan is the addition of pre-application advice for Local Authorities and their partners. This exciting new addition provides a feature rich, dynamic online environment for resolving application issues and seeking advice prior to submission.

Local Authorities simply receive an e-mail notification which links them directly to the pre-application in DataSpace Consult Live (Partner Edition). Pre-application drawings can then be viewed, measured and even drawn on. Comments can be created as annotations, notes and even as uploaded documents.

SNAP! Key Features

- Web Based Solution
- No Software To Install
- Full Submit-a-Plan Membership
- Application Processing
- Live Pre-Application Advice
- Multi Format Viewer With Measurement Tools
- Built In Map Interface
- Email Communication System
- Diary
- Quick Fill
- Electronic Delivery Of Paper Applications

SNAP! Key Benefits

- Quick To Implement
- Provides Applicants With Online Application Service
- Simple To Use
- Reduces The Need To Print Electronically Submitted Applications
- Enables Flexible Working
- Faster Communication With Applicants
- Saves Local Authorities Money
- Helps Reduce CO₂ Emissions

Options

Quick Fill Assist

Utility to assist Local Authorities registering Submit-a-Plan application in their back office systems.

DataSpace Consult Live

With the addition of a full DataSpace Consult Live account Local Authorities are able to invite individual or groups of consultees to review and comment on applications facilitating a shared consultation environment.

My Virtual Mail Room

Using the My Virtual Mail Room bureau service all paper applications Local Authorities receive are scanned by Resolution and delivered directly into DataSpace Live ready for electronic processing and consultation.

Payment Engine Integration

The payment integration module enables Local Authorities to receive online debit and credit card payments accompanying applications, directly into their existing payment system.
