DATASPACE-LIVE INSPECTION SOLUTIONS

ONLINE SITE INSPECTION MANAGEMENT + MOBILE INSPECTION APPS

Agile Building Control
Solutions for
Local Authorities

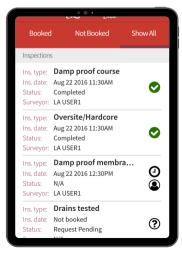

About our DataSpace Live Inspection Solutions

'DataSpace-Live Inspections' is designed to offer a complete and agile electronic inspection solution that is intuitive of the processes, requirements and conditions related to Local Authority Building Control Inspections.

Our solutions include a dedicated section in DataSpace-Live for scheduling and managing inspection visits plus two cutting edge mobile and tablet Apps, 'InspectMate' - our Inspections App for Building Control Officers and 'SiteMate' - our App for Site Managers, Builders and other building site contacts.

Our inspection solutions are designed to encompass our 'Agile Working' philosophy - working in the most agile and intelligent way to ensure the highest performance and efficiency. Our inspection solutions are streamlined, responsive, communicative, flexible and accessible in order to improve the overall electronic building control application and inspection process, for both Local Authorities and their clients.

You can download and test our Apps today! Just ask us to set up a login for you.

InspectMate - The Inspections App

InspectMate is a cutting-edge new app for Local Authority Building Control which allows site inspection reports to be completed on a mobile or tablet device. This brand new solution developed in conjunction with several local authorities, means inspection reports no longer need to be hand-written or typed up on a computer. They can now be auto-generated using the electronic inspection app and saved to the relevant application in DataSpace-Live. Photos can be taken and attached to a report using your device's inbuilt camera, comments and required actions can be added and application plans and documents can be consulted and checked.

The InspectMate App can also be used for scheduling and assigning inspection visits. The app fully syncs with an authority's DataSpace-Live account, so any data or bookings captured using the app are fed back to DataSpace-Live. The app can be used to call or text a site contact when a Building Control Officer is out of the office on visits, and an automated text service will keep them updated on the status of their inspection slot in an Officer's schedule. and a guide to what time to expect their arrival.

InspectMate works best with DataSpace-Live, but can be used independently. Talk to us about using InspectMate on its own!

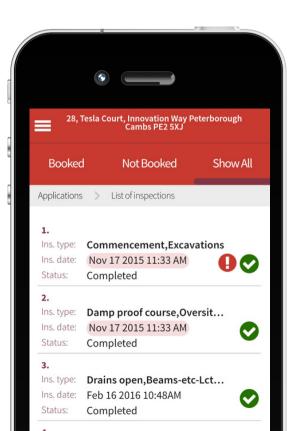

InspectMate - Designed to work Online or Offline

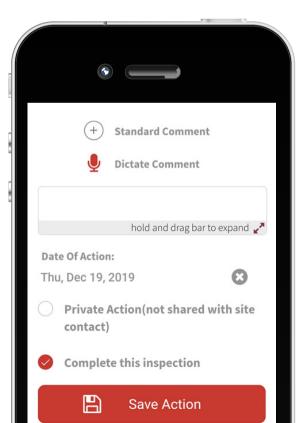

The key feature of InspectMate is that it can be used both online and offline. If an Officer thinks there might not be an internet connection on site, inspection details, application documents, notes and contacts, can be synced to their mobile device before leaving. This can be done from wherever they have an internet connection. They can then complete their inspection on site and the app will upload the saved information to DataSpace-Live when they next gain a connection.

>InspectMate Features

App Account Log-in

The Inspections App requires users to log in, protecting the data contained within inspections and applications.

Application & Inspections List

Any applications that have had an inspection scheduled will be downloaded to the app on a device. Sync your new inspections before leaving internet access and you'll be able to view, carry out and complete reports offline when out on site.

Viewing Inspection Details and Documents

Within the App you will be able to view the details of an application and its inspections, including the application form and its associated plans and documents. You will also be able to view any comments that have been added to the inspection in DataSpace-Live, including notes about gaining access to a site. You'll even be able to view the work location on Google Maps, and use Google Navigation to find your way there.

Contact Applicant or Site Manager

Contact details for both the applicant and a Site Manager or other site contacts are downloaded to the app and an Officer can call or text those contacts straight from the App. Texts even have saved templates so you can quickly text "Running late be with you within the hour"

Post Comments and Conditions

Complete inspections by adding notes, or outstanding actions that require further attention. All of these can be created by typing them, dictating them or selecting predefined editable notes. Any outstanding actions from previous visits will be brought to your attention as soon as you try and do anything on that site.

Take and Attach Photos

Attach photos to an inspection using your device's inbuilt camera, image gallery or other file location. Photo descriptions can be typed or dictated.

Use Online or Offline!

Download your inspections to your device before leaving an internet connection and you can carry out and complete them offline.

Upload to DSLive Application

The comment, conditions and photos you add to an inspection are saved to the mobile device and will be uploaded to the application in DataSpace-Live when you gain cabled, wifi or mobile data connection (can be restricted).

The DataSpace-Live Inspections Tab

DataSpace-Live features a dedicated Inspections Tab where Local Authorities can manage the inspections for their various building control applications.

With the Inspections Tab, authorities can define an inspection regime or plan. Applicants or site contacts can then use that plan to request each inspection, or inspections can be scheduled from the usual phone calls, or via a surveyor on site. A specific officer can then be assigned to an inspection and all inspections can be viewed on both a list and a map, or utilising a workload/surveyor/map planning tool which enables the most efficient working schedule and route between visits to be defined.

The DataSpace-Live Inspection Tab is designed to fully synchronise with the InspectMate inspections app. Any inspection visits booked in DataSpace-Live are downloaded to the app, along with any details and related application documents. In turn when an inspection has been completed using the app, any data, photos and comments captured are uploaded to the application in DataSpace-Live.

Inspection Reports

Comprehensive dated inspection reports including all inspection data, comments and photographs captured on site can be auto-generated from the DataSpace-Live system. Such reports can be downloaded and shared from DataSpace-Live itself and meet the growing demand for better transparency of information for home owners.

If an authority is subscribed to our 'Office' account, our DataSpace-Live Reports facility will enable authorities to generate an owner report on all inspections, scheduled or completed including those with outstanding conditions and whether their fee is pending or paid.

The Inspections Tab works best with our App, but can be used independently. Talk to us about using the Inspections Tab on its own to complete inspections.

>Inspections Tab Features

Applicant Inspection Request

Authorities can receive electronic inspection requests from an applicant or site-contact.

Schedule a Site Inspection Visit

Book an inspection visit on the system with a date/time and set a regime of inspection 'types' required to be carried out. Add any pre-visit comments or notes for the team.

Assign an Officer

A specific officer can be assigned to an inspection and details of the visit automatically sent to them by email and text. Inspections can be reassigned to other Officers as often as needed. A complete list of inspections for the day can be automatically emailed once finalised

Inspections List & Map

The Inspections List shows all inspections across all applications for any given day. A single view then allows you to see the workload for each surveyor in conjunction with a map. You can filter the list to view by certain criteria, such as 'requested' or 'scheduled', 'assigned to' or 'unassigned' and by date or inspection type etc.

Applicant and Site Manager Details

Applicant contact details are automatically pulled from the application for quicker communication. Any contact details for a Site Manager or other site contact are also downloaded to the app for the visiting Officer's reference.

Syncs with Inspection App

Any inspection visits booked in DataSpace-Live are downloaded to the inspection app when the surveyor starts their app, along with any details, comments and related application documents. Completed reports are uploaded from the app back to DataSpace-Live.

Add Comments and Notes

At any time useful comments and notes can be added against an inspection for the whole team to view.

Inspection completion

In addition to the app, inspections can be completed in the Inspections Tab with an accompanying actions and notes and photos. These can also be amended if necessary.

Client Results & Reports

Applicants and site contacts are automatically updated of actions and notes, but the authority can choose which notes to share with them. Comprehensive dated inspection reports including inspection data, comments and photographs captured on site can also be generated and shared with them from DataSpace-Live.

Departmental/Owner Inspection Reports

Our Inspection Reports facility enables authorities to generate departmental reports on all inspections, scheduled or completed including those with outstanding actions. This can be used as an audit trail or as a report to be handed to the building owner.

SiteMate - The Site Contact App

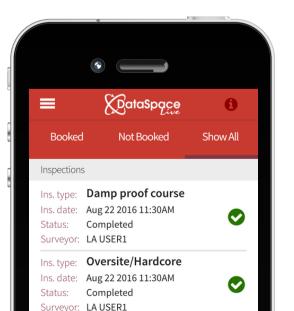

SiteMate is a cutting edge mobile and tablet App for Site Managers, Builders and other building site contacts. It enables them to more easily communicate with Local Authorities about site inspections.

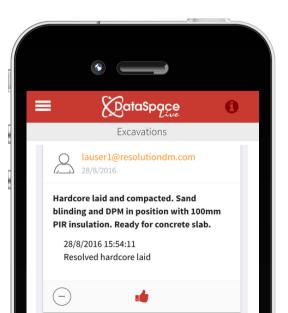

Once an authority has set an individual as the 'Site Contact' for a particular application work-site in DataSpace-Live or via the InspectMate app, that individual can then receive automated updates about inspections as well as messages, reducing the time the authority and site contact spend tracking each other down on the phone. It also reduces the chance of support staff getting requests for information they wouldn't normally have before the surveyor returns.

In addition to the App, the individual is provided with their own dedicated 'My Sites' section in their own DataSpace Live Site Contact Account. Both here and within the App a range of functionality is available to its site contact users.

List of Inspections

Viewing Condition Comments

Sending authority a message

>SiteMate Features

My Sites List

The user is able to view a list of all sites in both DataSpace Live and on their App that they have been assigned to as the Site Contact. Each listing comes with a set of details about the site, the original building control application and the inspections that need to be carried out.

Here they can view a specific inspection and any notes or application plans and documents an authority adds to it.

Inspection Requests

The Site Contact is also able to request an inspection visit either with a desired date and choice of am/pm slot, or for a visit 'as soon as possible'. They can also include a message with their request.

The authority are notified of the request and will either confirm or offer an alternative through the App or by direct contact. The finalised agreed booking will appear in both the authority's DataSpace Live account and the Site Contact's 'My Sites' list.

Outstanding Actions

The Site Contact can view any outstanding actions the surveyor adds against a specific inspection and how they need to be resolved.

The Site Contact is also able to add their own comments for the authority and add photos as evidence that they have met the required solution. An action will be shown as 'completed' when a surveyor is happy it is compliant.

Key Benefits of our Inspection Solutions

InspectMate & DataSpace Live

- Manage bookings & inspections more easily.
- Calculate efficient route save time & reduce carbon footprint.
- · Advanced, modern inspection tools for quicker and more efficient inspection process.
- Use the app on/offline for flexible working.
- Compatible with a range of Android or Apple mobile or tablet devices.
- Captured data syncs fully between DataSpace-Live & App.
- Better and more timely communication and updates for site contacts.
- Track and monitor department inspection workload and revenue.
- Hassle free, latest versions.
- Support and training available.

SiteMate & DataSpace Live

- Manage bookings and inspections more easily & efficiently reducing load on support staff.
- Quicker inspection booking service for applicants & site contacts.
- Data & bookings sync fully between DataSpace-Live & App.
- View scheduled visits on a map to calculate efficient routes save time & reduce carbon footprint.
- Site Contact automatically updated about actions, remedies and other details.
- Site Contact can respond with photographic evidence to resolve outstanding actions more quickly, saving the surveyor another trip to site.
- Comprehensive site inspection reports for information transparency.
- App works with cabled, wifi, 3G or 4G connection for flexible connection.
- Compatible with a range of Android or Apple mobile or tablet devices.
- Track and monitor department inspection workload and revenue.
- Hassle free, latest versions.
- Support and training available.
