PLAN CHECK

PlanCheck is our brand new plan-checking solution In DSLive. Authorities can assess and comment on plans against a comprehensive editable 'Check List' and as they work their way through the list they can assign a status, report an outstanding condition and even add comments to each check.

A 'Notify' button enables the authority to send an automated email or text message of any outstanding conditions that require attention to the applicant or agent straight from DSLive. The applicant or agent can then login to their Submit-a-Plan account to respond with a comment or upload any documents as required.

PlanCheck can be accessed from anywhere with internet access and allows you to invite plan-checkers in, meaning not only can plan-checking be carried out by your team from home but also by freelancers, facilitating flexible working.

STANDARD FORMS

Our standard forms facility enables authorities to create a range of documents online within DSLive itself, such as initial notices, approval certificates, inspection reports and standard letters which can then be shared with an applicant, agent or other contacts.

Templates for these documents can be created and updated with some pre-populating fields that pull information from applications and inspections in DSLive and others that are editable where information can be typed into as and when you need.

Documents can be saved to the application and shared with the applicant or agent straight from DSLive.

REPORTS

DSLive Reports enables authorities to create reports across all applications, inspections and plan-checking in their DSLive account.

Reports can be defined by a range of different DSLive fields and criteria, enabling authorities to monitor and review the work or money coming into their department(s).

A generated report can then be viewed, saved, exported to PDF or excel, printed or shared.

DSLive Reports will be particularly valuable for Building Control Partnerships who need to monitor and report on their individual teams as well as their partnership overall.

PLAN SHARE

PlanShare is a web based solution in DSLive enabling authorities to share folders of application documents and other information electronically online with applicants, agents, inspectors, consultees, site managers, partner or fire authorities and more.

The sharing of a folder using PlanShare also creates an online consultation environment in DSLive where individual or groups of consultees can review and comment on documents using our advanced document viewing tools.

Consultees do not require any new software but simply receive an email notification which links them to the application online from anywhere with internet connection. PlanShare is a great solution to the increasing need of authorities to externalize plan and structural checking activities.

SITE MANAGER'S APP

Fully synchronizing with DSLive is our Site Manager's App which enables Site Managers to receive live updates on inspections to their phone or tablet and even request inspection visits from Local Authorities.

The Site Manager's App is aimed at improving the efficiency of the building control process and client satisfaction.

Don't forget...

We also have an Inspections Module & App that enable inspections to be scheduled and managed in DSLive and carried out electronically on a mobile or tablet on site either online or offline.

Upload the completed inspection to the application in DSLive and send a report to the applicant, agent or other contact.

USER ADMIN TOOL

Our coming User Admin Tool will enable authorities to manage their own users and some of their DSLive settings.

The admin tool will be accessible to a department manager or administrator as where that person will be able to add, edit or remove users, as well as similarly managing those elements of different DSLive modules and tools which are changeable such as inspection types, templates, standard notes and the checks included in the PlanCheck check-list.

Local Authority Resource Hub

This year we are also considering creating a Local Authority 'Resource Hub', where authorities can advertise work they need carrying out for them such as plan-checking. We'd like to hear your suggestions of what else you might like to see on the Resource Hub.
